INVESTMENT VIEW	
Base case of \$649 per share is 30% below the \$924 share price (bull \$939, bear \$258).	
At \$924, the stock is priced close to the bull case: FY2027 revenue near the ~\$50B quarterly run rate Micron guided for Q4 FY2026, and a ~65% long run gross margin.	
The base case has memory pricing easing as new industry capacity arrives in 2027–28, taking gross margin from 80% in FY2026E to 60% by FY2031E, near Micron's prior-cycle peak.	
About \$100B of committed revenue under Micron's strategic customer agreements should make the next downturn milder than past cycles, but the bear case shows the value at risk. View: risk/reward is unfavorable at the current price. The question is how long AI driven margins last?

Capex, opex ratios and balance-sheet inputs do not change by scenario
Implies ~\$38B/quarter in FY27 vs. ~\$50B Q4 FY26 guidance (prices ease from peak)
Shortage persists: FY27 revenue near the Q4 FY26 run-rate (~\$200B annualized)
New fabs (Micron ID1 mid-2027, ID2 late 2028) and peer capacity push pricing down in FY28–FY29; contracts soften the drop
Falls from ~86% (Q4 FY26 guidance) toward ~60% by FY2031
AI demand keeps margins above the prior-cycle peak; terminal ~65%
Trough 42%, milder than past cycles (FY2023 was ~9%) given committed contract volumes

SIMPLIFICATIONS

Revenue	Forecast as one company wide total rather than separate DRAM and NAND schedules. Bull and bear cases change only revenue growth and gross margin.
FY2026 estimate	Built on the FY26 Bridge tab from nine month actuals plus Q4 guidance; Q4 items without guidance are labeled estimates. FY2026 results are scheduled for release on September 30, 2026.
Working capital	Receivables, inventory and payables use days (DSO, DIO, DPO) on a 365 day basis; other items use percentages of revenue.
PP&E	Beginning PP&E plus capital expenditures, less government incentives and depreciation.
Debt and equity	Direct year end debt and dividend inputs. Buybacks equal a payout share of free cash flow less dividends. Diluted shares fall with buybacks and rise with stock based compensation, both at an assumed price. Other financing and FX flows are routed through equity.
DCF	Mid year convention, one WACC, Gordon Growth terminal value. Stock-based compensation is not added back. Operating cash flow adjustments match the cash flow statement.
Net cash	Uses FY2026E year end net cash. Customer deposits under Strategic Customer Agreements are recorded in financing and are expected to be returned to customers later. The model does not deduct them from net cash.
